The parable of the blind men and an elephant

Galeska Moravioff présente

Rashomon effect

From Wikipedia, the free encyclopedia

The **Rashomon effect** occurs when the same event is given contradictory interpretations by different individuals involved. The effect is named after Akira Kurosawa's 1950 film *Rashomon*, in which a murder is described in four mutually contradictory ways by its four witnesses.^[1]

The Rashomon effect is not only about differences in perspective. It occurs particularly where such differences arise in combination with the **absence of evidence** to elevate or disqualify any version of the truth, plus the **social pressure** for closure on the question.

My perspective

Demand for data scientist will not be a problem if we all do the right thing.

Elements for a healthy ecosystem: the company perspective

There is talent outside the company!

Elements for a healthy ecosystem: the university perspective

There is knowledge outside the university!

Elements for a healthy ecosystem: the administration perspective

We need fair and clear rules!
